JOB BOARD PLATFORM

SRS DOCUMENT & UML DIAGRAMS

Software Engineering Assignment

Use Case • Class • Activity • Interaction • State Chart • Data Flow

1. SRS – Introduction

Project Name: Job Board Platform

Purpose: Connect job seekers with employers through a simple online platform.

Problem: Manual job searching and recruitment can be slow, scattered and difficult to track.

Solution: A centralized system for job posting, searching, applying and recruitment management.

Users: Job Seeker, Employer/Recruiter and Administrator.

2. SRS – Scope & Functional Requirements

Job Seeker: register/login, create profile, search jobs, view details, apply, track applications.

Employer: register/login, create company profile, post jobs, edit/delete jobs, view applicants.

Administrator: manage users, monitor job postings and handle inappropriate/invalid content.

Search & Filter: title, location, category, experience and employment type.

Application Management: application status such as Applied, Shortlisted, Rejected and Selected.

3. SRS – Non-Functional Requirements

Performance: Pages and common operations should respond quickly under normal load.

Security: Authentication, authorization and secure handling of user information.

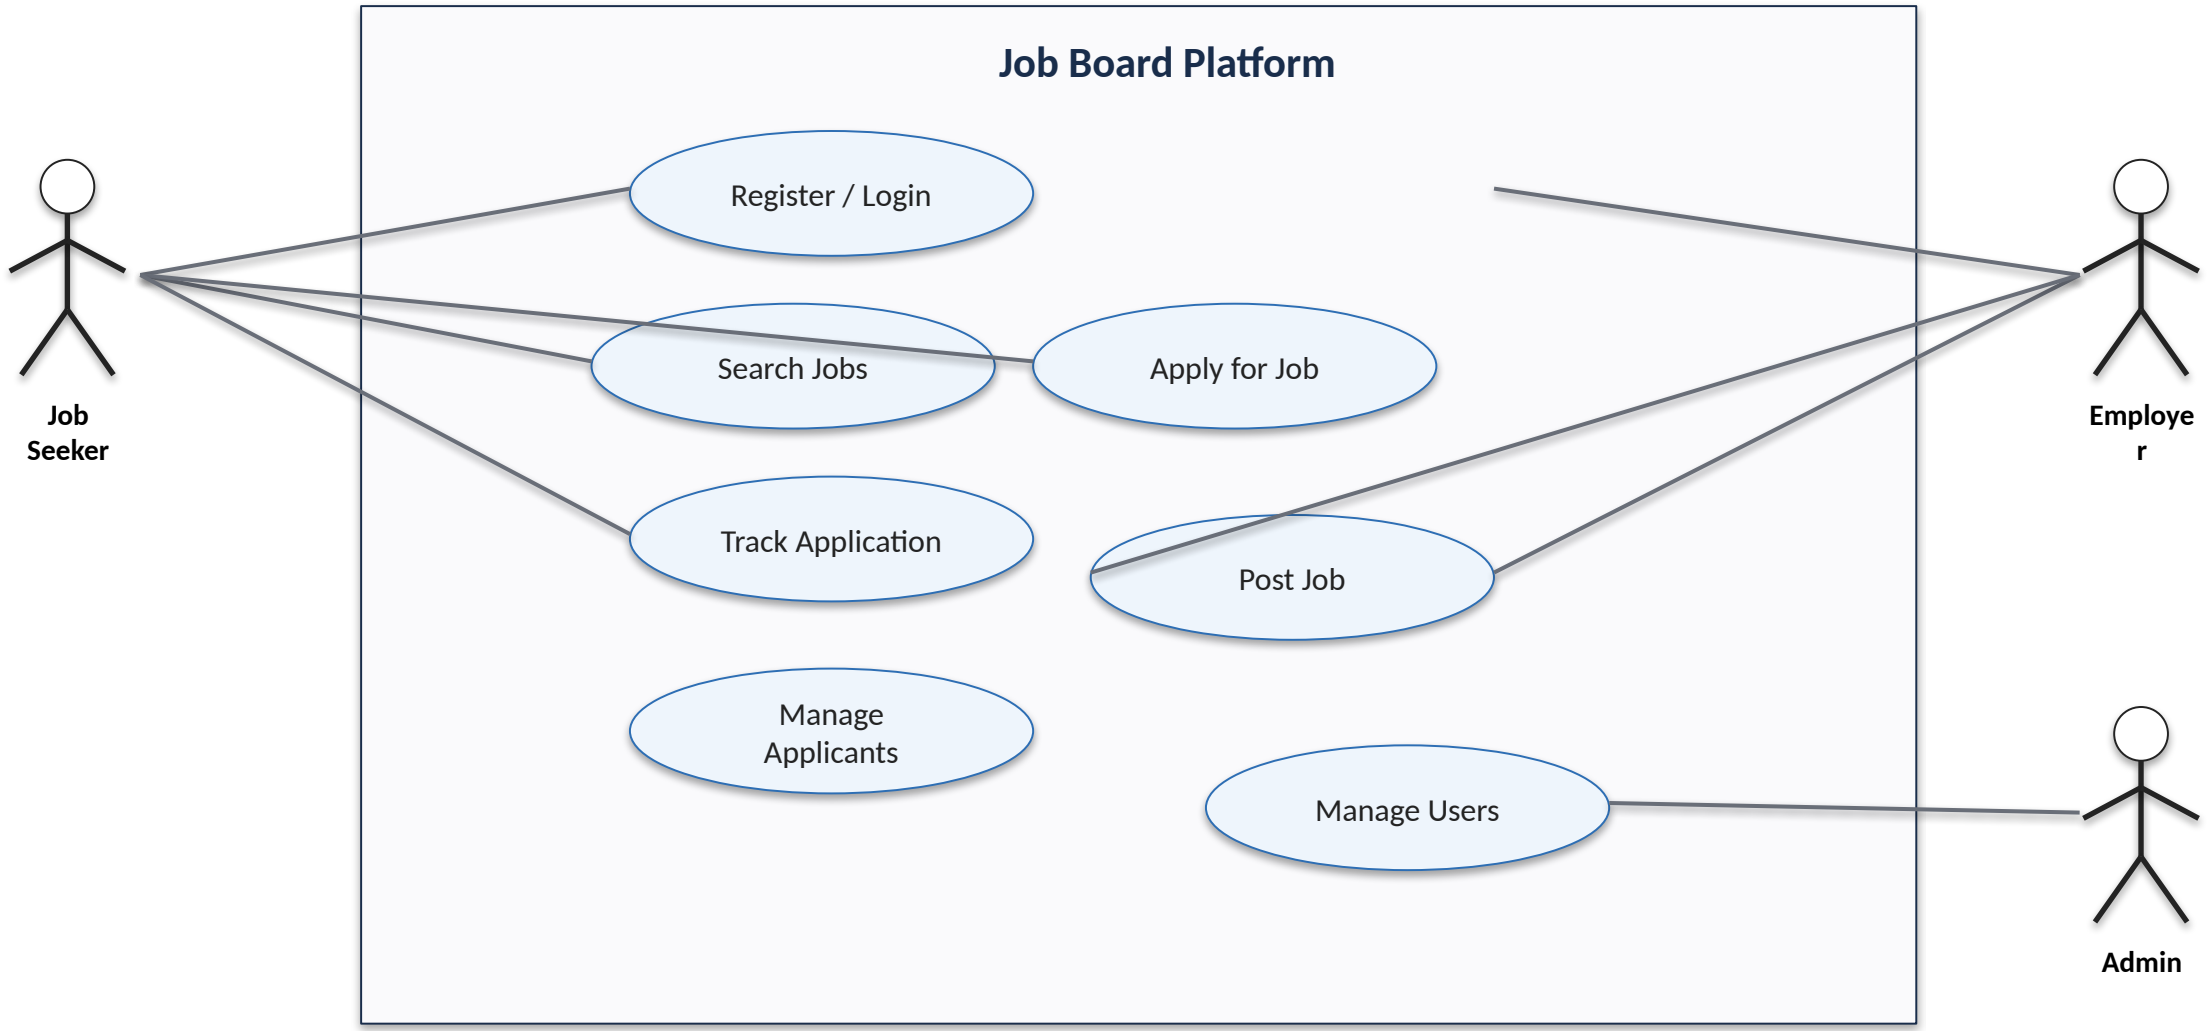

Usability: Clean interface with simple navigation for job seekers and recruiters.

Reliability: Applications and job postings should be stored consistently.

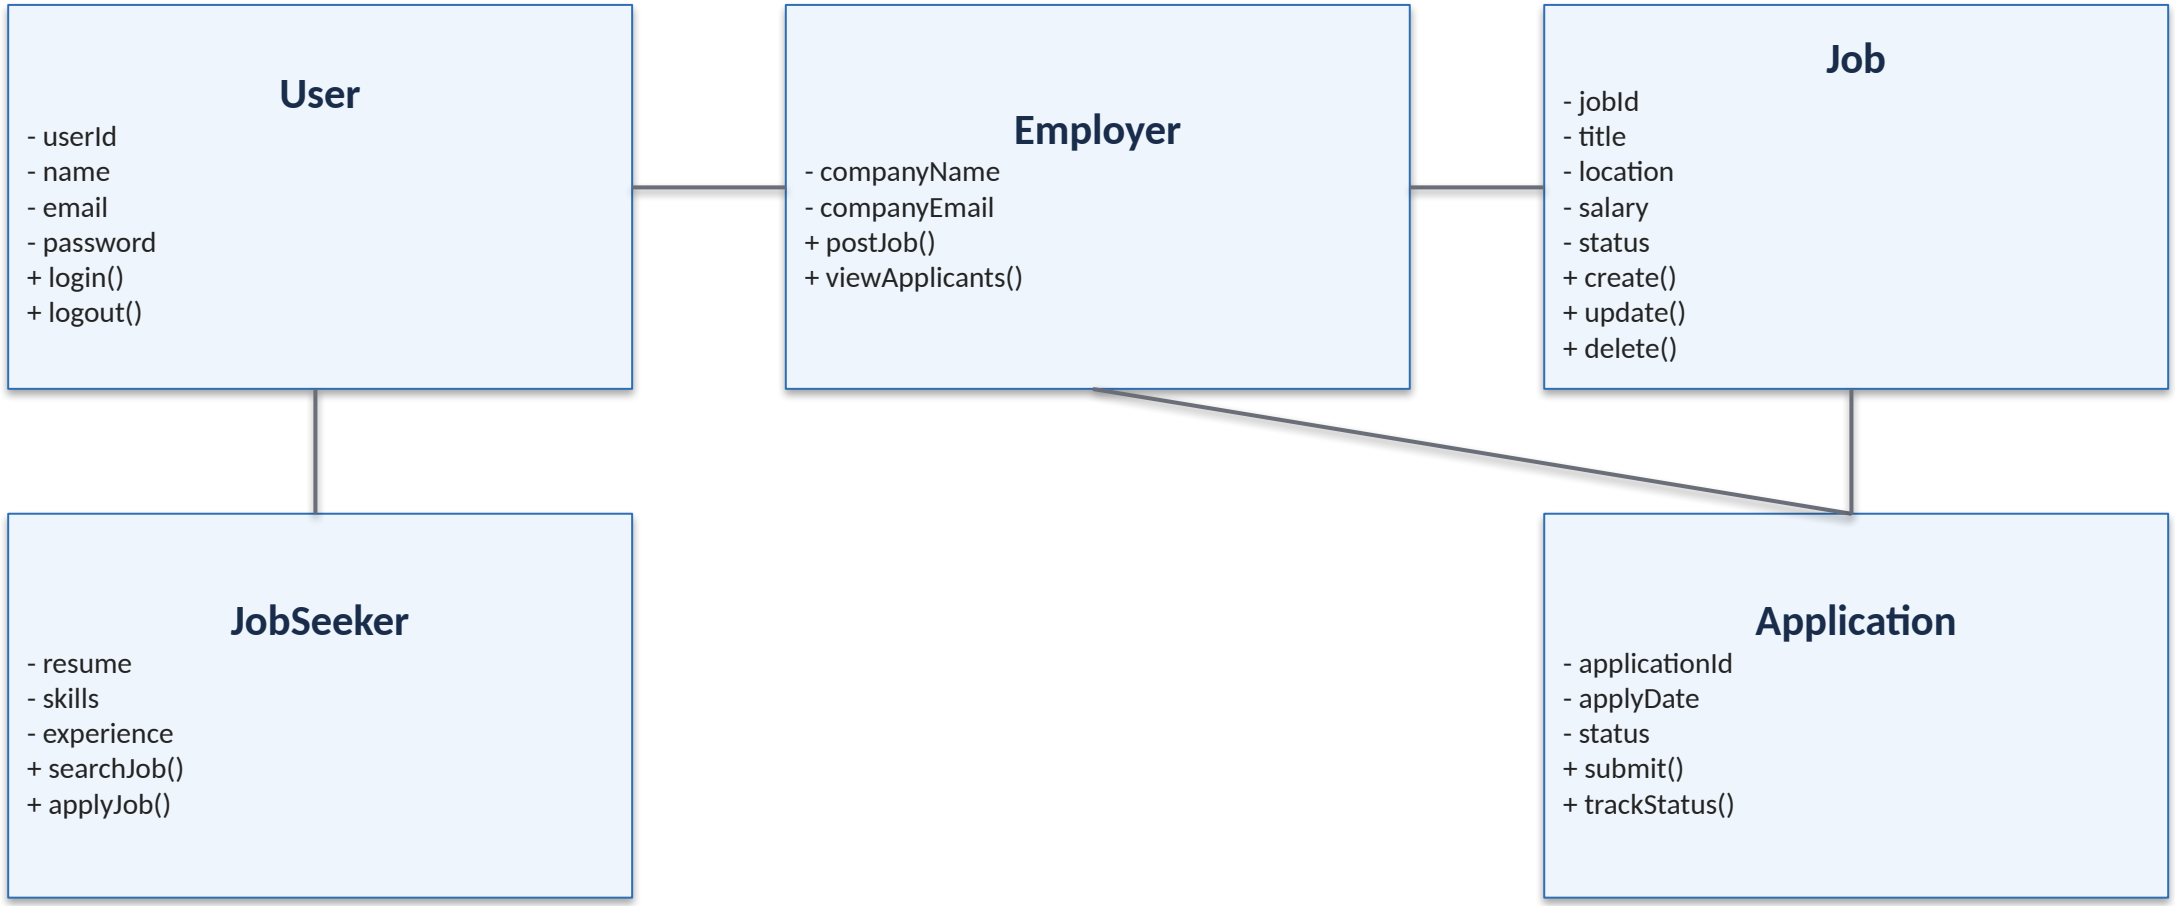

Scalability: System should support growth in users, jobs and applications.

Maintainability: Modular design so features can be updated easily.

4. UML – Use Case Diagram

5. UML – Class Diagram

Relationships: User → JobSeeker/Employer | Employer → Job | JobSeeker → Application

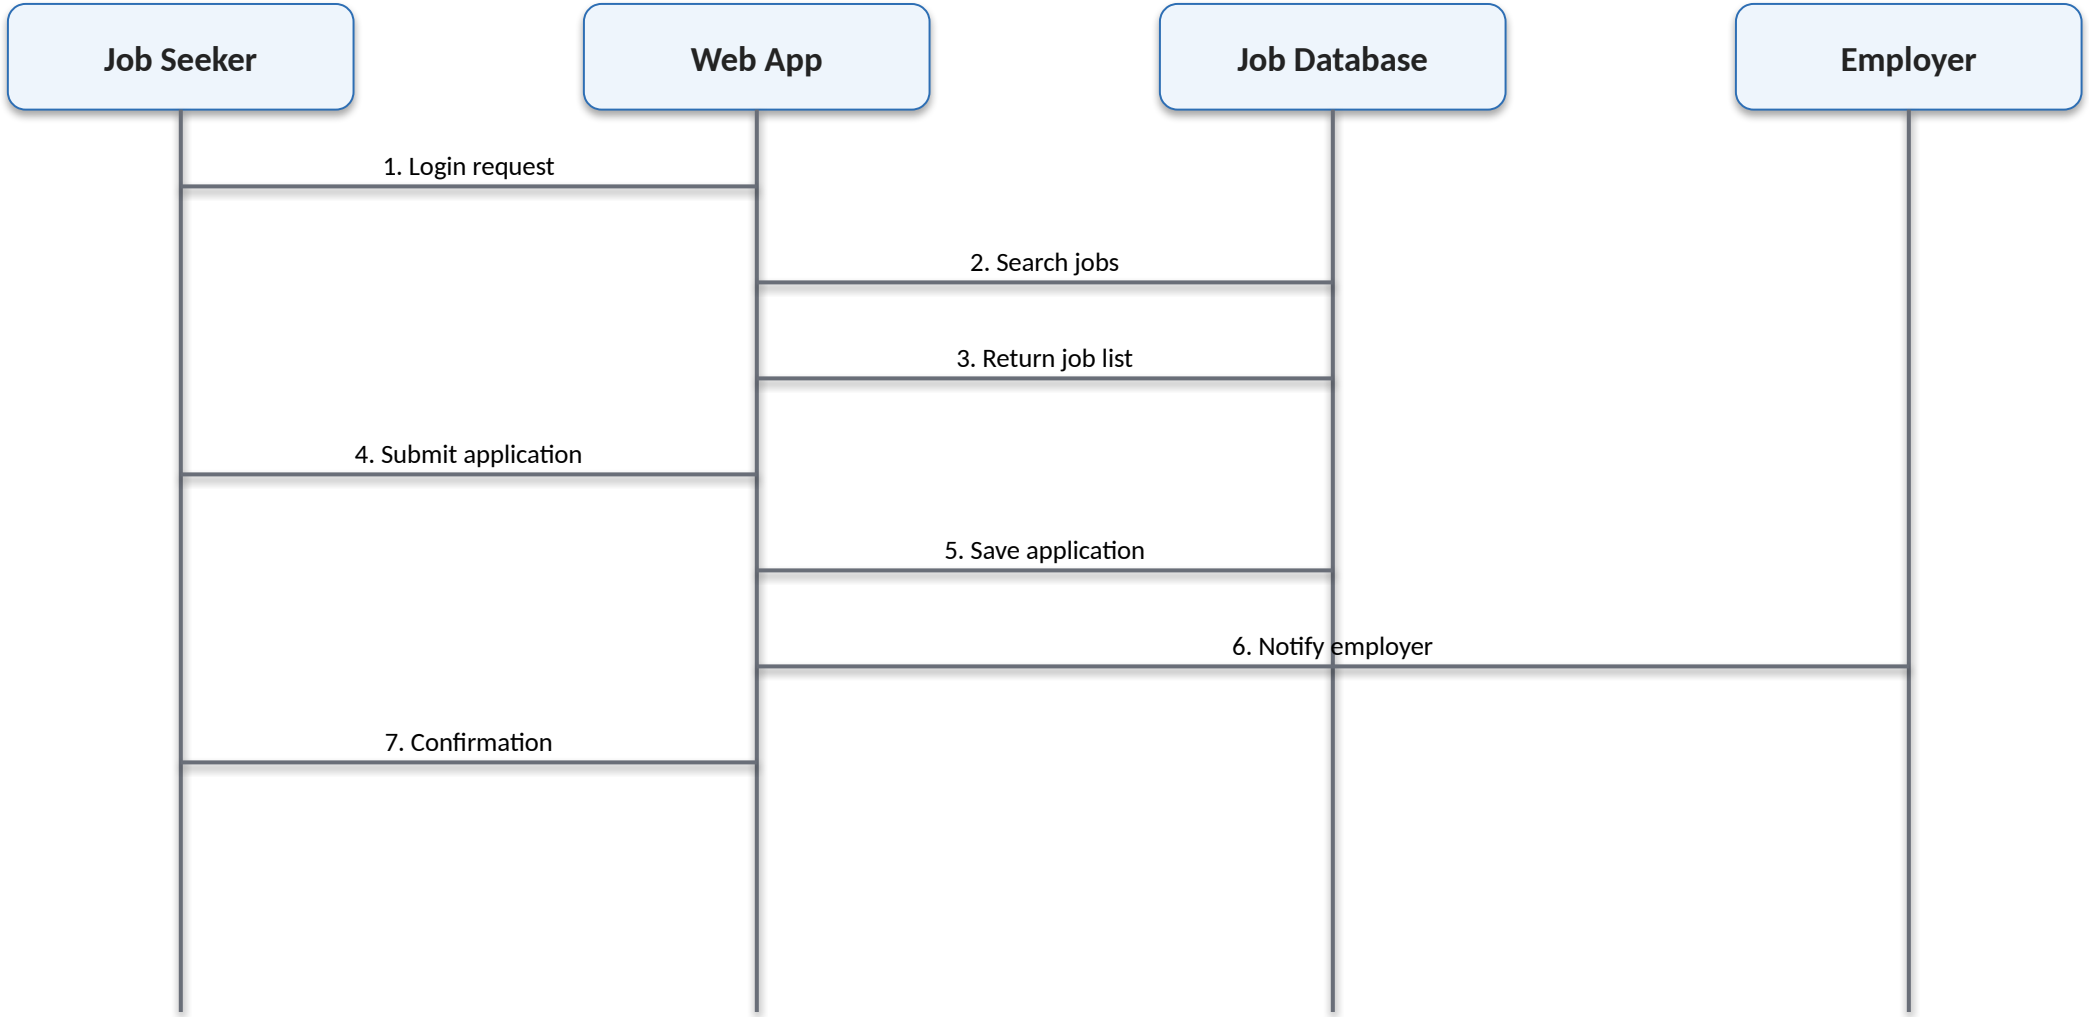

6. UML – Activity Diagram

Job Seeker applies for a job

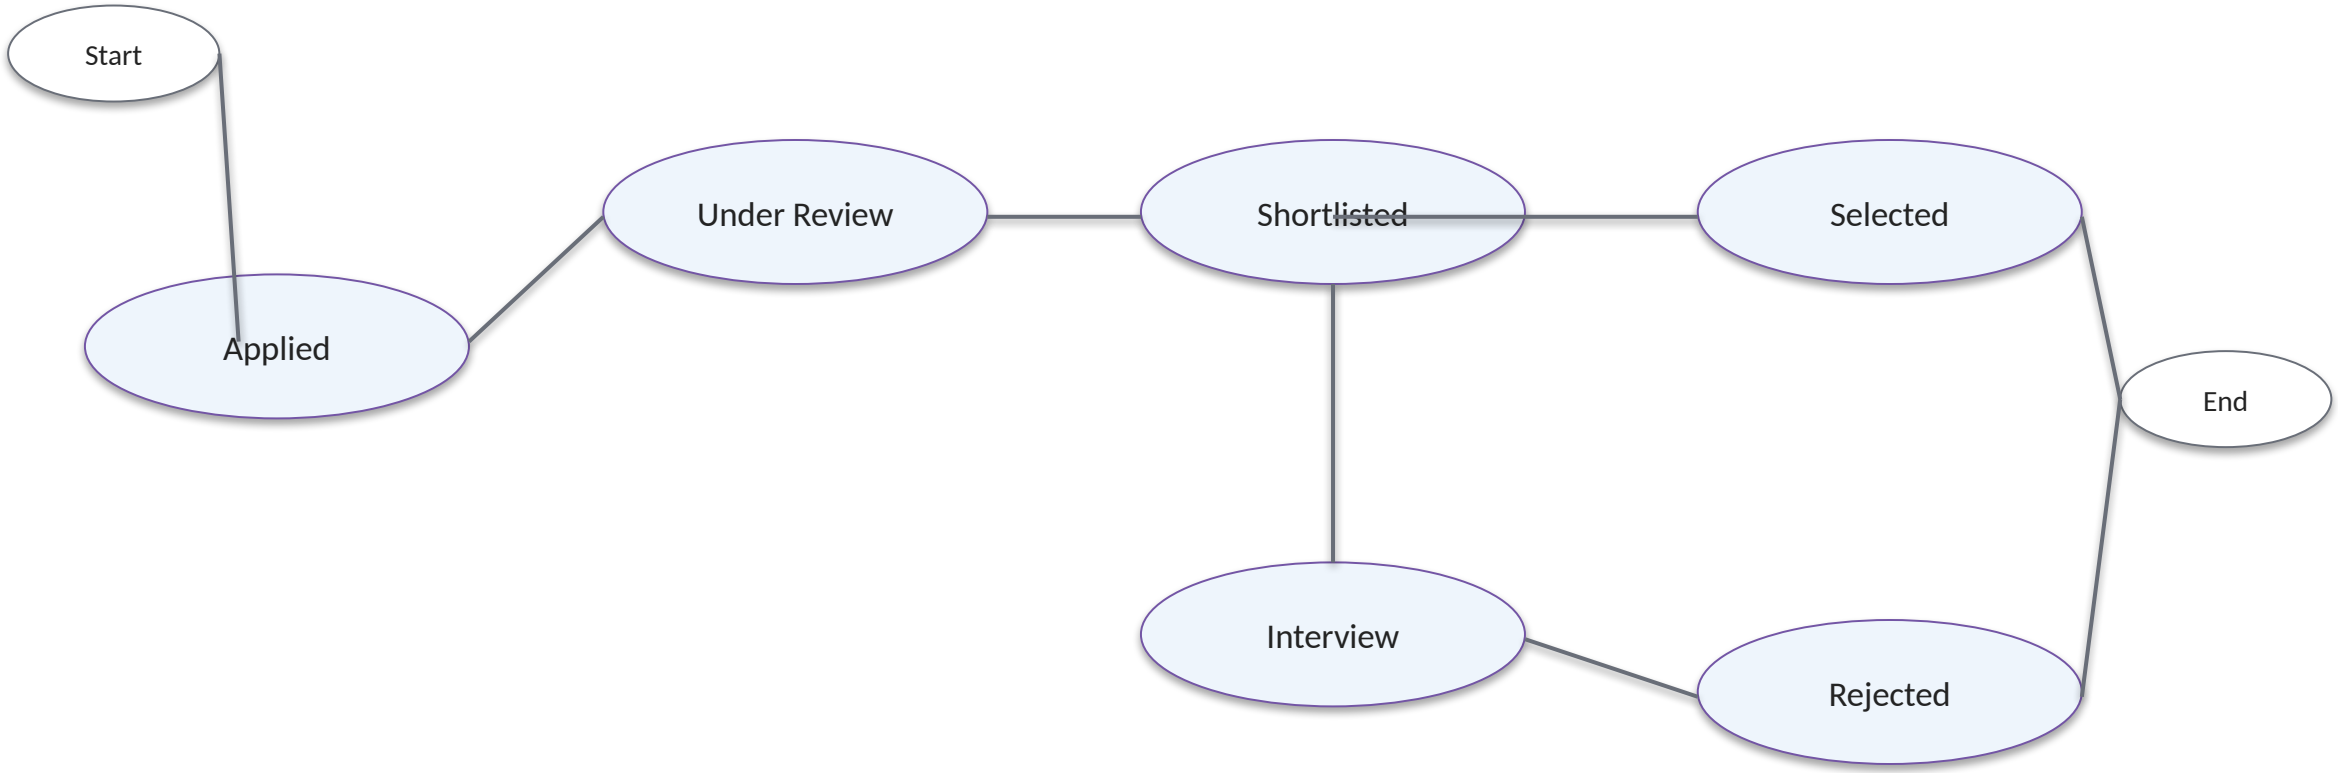

7. UML – Interaction (Sequence) Diagram

Job application sequence

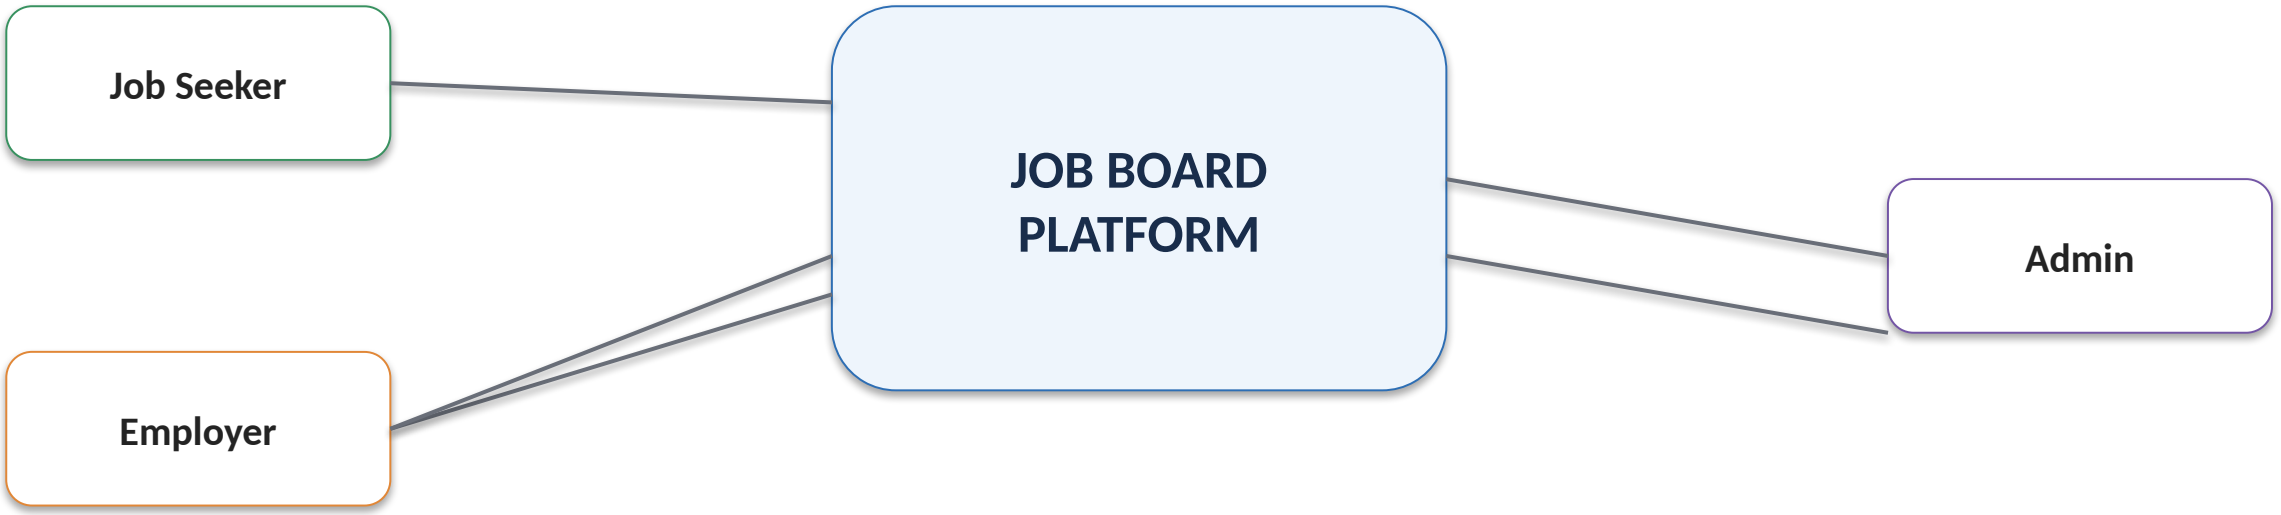

8. UML – State Chart

Application status lifecycle

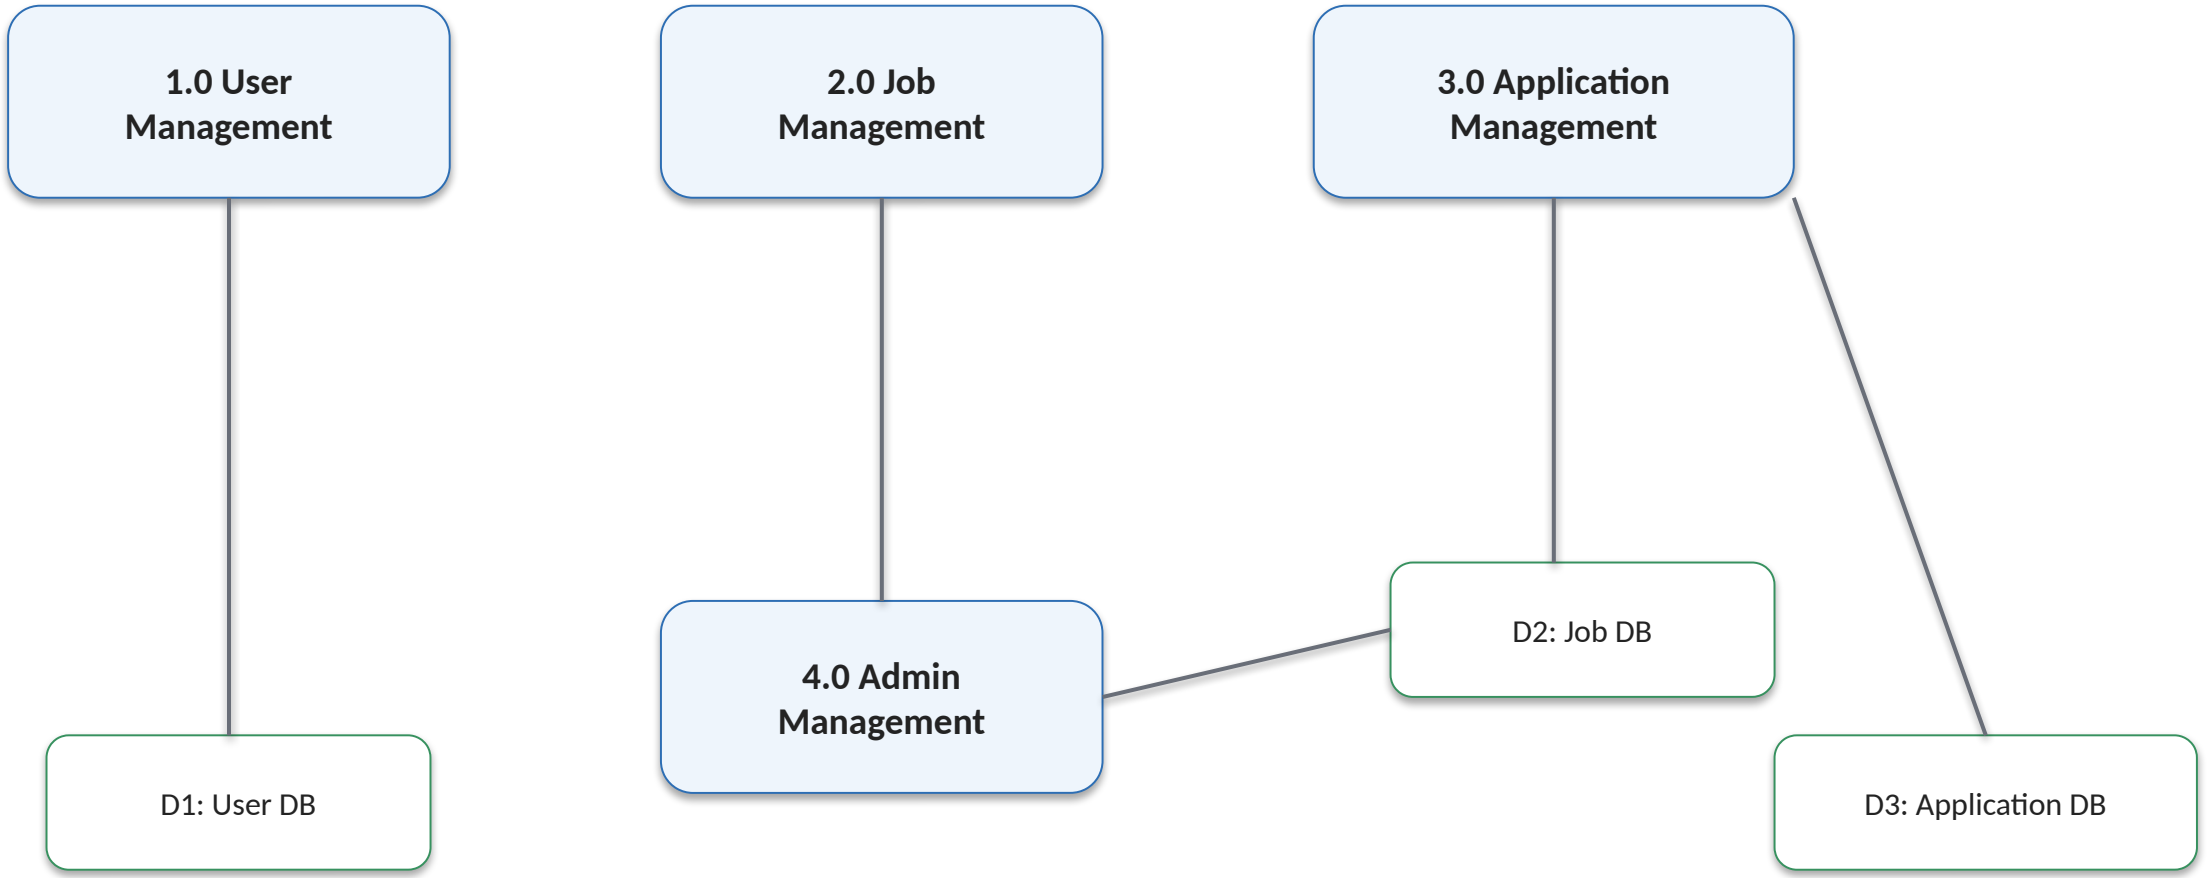

Typical flow: Applied → Under Review → Shortlisted → Interview → Selected / Rejected

9. Data Flow Diagram – Level 0 (Context)

10. Data Flow Diagram – Level 1

Main data stores: Users, Jobs and Applications. Processes exchange data through the web application.

11. Conclusion

The Job Board Platform provides a centralized solution for recruitment and job searching.

The SRS defines the system scope, users and functional/non-functional requirements.

UML diagrams represent system behavior, structure, workflow, interaction and data movement.

The design can be extended with notifications, resume parsing, recommendation systems and analytics.
